

Centralite and Connect Tech - A Success Story

To some, the term "central lighting control" means standing in the middle of a room and clapping. To the designers at Centralite the technology is more sophisticated, although the end result is almost as easy to operate.

Centralite Systems designs and manufactures the ultimate luxury item -- home automated lighting systems. Based in Alabama, Centralite's innovative design ideas have made what was once the strict domain of the wealthy attainable for everyone building a home.

Centralite ensures whole-home monitoring remains affordable by eschewing the traditional, expensive, multiple-computer set up. Instead, one Centralite processor is capable of controlling the entire system.

Reliable integration is at the heart of this system, and Connect Tech's [WhiteHEAT 4-port RS-232](#) hub is the preferred equipment for Centralite. Reliable and inexpensive, "the WhiteHEAT enhances our ability to integrate lighting, audio, HVAC, security and surveillance," notes Centralite's Steven Kyser.

Reliability was an issue with adapters purchased from another company in the past, so Centralite was pleased to find a quality board along with the first-class support that sets Connect Tech apart from the competition. "Previous products have not been adequate for our purposes," explains Steven. "The (WhiteHEAT) product works great with the application that we are using it for. It is nice to find a good product and professional people to deal with when purchasing equipment to fit our needs."
