

Connect Tech gets to the Point-of-Sale: An Application Story

Providing point-of-sale packages to some of North America's largest and most diverse retailers equals vast connectivity requirements. Today's retail operations are sophisticated and comprehensive. Bar code scanners, credit and bank card readers and authorization, cash register transactions, and gas pump activity, if present, must all be tracked and conveyed to a central system.

One such company equips retail outlets with a flexible, inclusive package that combines these elements and provides the analytic components needed to process reports. Reports are versatile, able to breakdown by store, cash register, or time of day, for example. In short, they provide systems that increase profitability and minimize work load.

So what's connecting all the elements of this system in some of the largest retail chains? Connect Tech boards, of course. The Intellicon 6+2, for instance, is in use in 7-Eleven store systems to connect to the various machines and data gathering systems in use in its combined gas and convenience stores.

Our versatile DFlex-8 can be found in the complex central nervous system of book giant Chapters. Through the use of Serial Line Interface Modules, DFlex boards are fully user-configurable to suit the various I/O requirements of a specific application.

Reliable and flexible, Connect Tech adapters are a perfect fit in the POS system.
